

Jill Amery - Solar Arcs and Timing

Solar Arc Directions to a horoscope's angles – in combination with major transits – are an invaluable key to both rectification (the establishment of a correct birth time) and forecasting work. They are easy to use and form an essential part of any serious astrologer's toolkit for analysis.

Jill will present examples of both rectification and forecasting work in which Solar Arcs have proved invaluable, using charts of some famous people as well as some from the audience. Those with uncertain birth times should find this presentation very helpful!
